In [1]:
```python
a=50
b=70
print ("value of a = ",a)
print ("value of b = ",b)
```

```
value of a =  50
value of b =  70
```

In [2]:
```python
a=56776
b=988
c=a*b
print("value of {} multipled by {} is {}".format(a,b,c))
```

```
value of 56776 multipled by 988 is 56094688
```

In [3]:
```python
a=6666
b=666544
c=990000
avg=(a+b+c)/3
print(f"avg of {a} and {b} and {c} is {avg}")
```

```
avg of 6666 and 666544 and 990000 is 554403.3333333334
```

In [5]:
```python
print("hi ",end="")
print("today is tuesday")
```

```
hi today is tuesday
```

In [9]:
```python
print("hello","please test this ","function",sep='----')
```

```
hello----please test this ----function
```
